## SAFETY

- The ISO 3000 is heavy. Take care when installing.
- Ensure the operating area is capable of taking the weight of the ISO 3000.
- Trapping hazard - Keep hand and loose clothing away from the torque wrench during use.
- To avoid damage to the torque wrench under test do not exceed the wrench set torque value.
- To avoid damage to the transducer do not exceed the maximum capacity.
- Never exceed the maximum torque capacity of the ISO 3000 ( $3000 \mathrm{~N} \cdot \mathrm{~m} / 2200 \mathrm{lbf} \cdot \mathrm{ft}$ ).
- Do not operate without a torque measurement system connected and working.
- The ISO 3000 is designed for testing torque tools, do not use for other purposes.

## INTRODUCTION

The Norbar ISO 3000 Torque Wrench Loader is designed to test torque wrenches up to a maximum capacity of $3000 \mathrm{~N} \cdot \mathrm{~m}$ or $2200 \mathrm{lbf} \cdot \mathrm{ft}$.

To measure the applied torque a torque transducer coupled to an appropriate measurement instrument are required.

This manual covers 20505 only.

## FEATURES AND FUNCTIONS

- Allows torque wrenches to be tested or calibrated to relevant standards, including BS EN ISO 67891:2017 and BS EN ISO 6789-2:2017, when used in an appropriate temperature-controlled environment and with appropriate ancillary equipment.
- Also available with $1500 \mathrm{~N} \cdot \mathrm{~m}$ capacity, see ISO $1500 \mathrm{~N} \cdot \mathrm{~m}$ (Part number 60300).
- For part identification see drawing below:

## INSTALLATION

NOTE: If the equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

## Items Required

Norbar torque transducer to suit capacity of test with suitable torque display instrument.

## Location

Ensure location can cope with weight of loader.
Locate ISO 3000 on a level surface at a comfortable working height.

## Tool Reaction Post

Slide "Tool reaction post" on to the reaction bar.

## Reaction Plate for Small Torque Wrenches (Optional)

To use small torque wrenches a smaller reaction plate may be required.

Fix using M8 socket cap screws provided with reaction plate. Tighten to $20 \mathrm{~N} \cdot \mathrm{~m}$.

## Extension Arm

For long torque wrenches fit extension arm as follows:

1. Fit the small square of the extension arm into the existing arm.
2. Insert the two locating dowels through the horizontal holes. Keep thread vertical.
3. Fit securing pins from the top of the arm into vertical thread. Tighten with 5 mm hex key (included) as shown in picture.
4. Attach the support strut at the end of the extension arm.

## Reaction Post

Slide reaction post onto ISO 3000 reaction arm.

## Torque Measurement

Select the lowest capacity torque transducer to cover the wrench to be tested.
Mount the male square of the transducer into the female square of the gear box, use adaptors to suit.
Place collar over the transducer.
Connect a transducer lead from the transducer to the instrument.
Ensure the instrument functions correctly. (If in doubt see operators manual).

## OPERATING INSTRUCTIONS

## Locating a Torque Wrench

Select the correct adaptor to place the torque wrench drive into the transducer.
Set the reaction post position on the reaction arm so it is in the middle of the torque wrench handle or the marked load point on the handle.

Set the reaction post height to ensure the wrench handle is parallel to the reaction arm.
If the Torque Wrench is too small for the reaction arm use reaction plate option (Part 20606).
If the Torque Wrench is too big for the reaction arm fit extension arm supplied - See installation.
The large gear box ratio makes movement in the output drive difficult to detect.
Use the ' A ' and ' B ' arrows on the hand wheel and gearbox output as an indication.
For clock-wise calibration 'A' indicates direction to apply force \& ' $B$ ' indicates direction to release force.
TIP: In the case of a ratchet wrench, with push through square drives, it is important to ensure the square is operating on the correct side of the ratchet.

## MAINTENANCE

The ISO 3000 is engineered for a long maintenance free life. Under normal operation maintenance is not required.

When cleaned do not use abrasive or solvent based cleaners.
For maintenance and recalibration of the instrument and transducer refer to their manuals.
